

# Quality Remediation

## Elimination of Packaging Defects

### Client Needs

A leading HCT/P Biologics company in the field of allograft solutions, experienced issues due to pinholes developing in their flexible packaging after exposure to distribution conditions. They needed a packaging redesign to eliminate the risk of pinholes occurring and increase quality.

### Steps Taken by Adept

- Analyzed the package throughout the distribution environment to identify what was causing the issue
- Discovered the root cause through an analysis to identify package performance and process issues
- Redesigned packaging with new material to withstand extreme distribution temperatures
- Significantly improved production time by changing packaging materials
- Cost savings was also achieved due to the redesign of the package

## THE RESULTS

Zero Failures During Simulated Testing

Improved Productivity Decreased Seal Time from 3 Minutes to 3-5 Seconds

\$15.00-\$20.00 Cost Savings Per Package
