

Serialization Management

Client Needs

Develop and install a standardized serialization solution for all of the secondary packaging lines of three packaging sites to comply with EU FMD and other national regulations.

Challenges

Worked with the vendor to develop a standard solution to be adopted by all of the packaging lines over three packaging sites of two countries in Europe.

- 2 countries
- 3 packaging sites
- +30 packaging lines

Results

Compliance of Secondary Packaging Operations for EU and RU Markets

Serialization Program Rollout From Solution Design to Machines Qualification

Project Management Support Resulting in Minimal Client Effort

STEPS TAKEN BY ADEPT

- Solution design (L1, L2 and L3) for integrated serialization machine (checkweigher, print & check, tamper evident labeler) and shrink-wrapping bundler machine
- Project documentation preparation and review (URS, FDS, CS, TM, FRA, etc.)
- Modular test cases development (FAT, IQ, OQ, PQ)
- Validation and qualification activities for direct execution of 25 packaging lines
- Updates for Russian requirements (documentation update and re-validation activities on all the lines)
- PMO support (workshops preparation, vendors management, daily schedule, weekly status updates to sr. management)
