

Serialization Management

Client Needs

Develop a site serialization program and systems rollout strategy to develop serialization capabilities for secondary packaging.

Challenges

Managing the implementation program and aligning serialization activities to ensure compliance with customers' serialization requirements and needs, which includes:

- Two serialization IT infrastructures
- Rollout of 6 serialized packaging lines to support Supply Chain, PROD, QA and Engineering organizations

Results

Compliance of Secondary Packaging Operations for CN, SK, SA, US Markets

Compliance with Unit Serialization and Full Aggregation (Up to Pallet Level)

Post Implementation Support Provided By Local Adept Resources

STEPS TAKEN BY ADEPT

- Established PMO, defined RACI and Governance model
- Completed project audit and alignment for site serialization program
- Audited customer relationships and standardized serialization requirements
- Completed audit of internal processes to implement standardized change management (AW, packaging, requirements), qualification documentation and product configuration activities

We Would Love to Partner with You on Your Next Packaging Project
