

Client Needs

A leading manufacturing company was experiencing quality issues with the plastic automotive interior parts that they supplied to their OEM automotive customers.

Challenges

They requested that Adept Packaging review the existing packaging and develop solutions to the issues.

Results

Storage Optimization from Resizing the Package

Elimination of Quality Issues

Cost Per Part Reduction due to better optimization

STEPS TAKEN BY ADEPT

- Conducted detailed audits of all packaging and documented areas of improvement
- Engaged customer packaging sources and detailed specific changes to be made to every packaging element, based upon the findings from the audits
- Ensured that packaging suppliers used specific dunnages and securement methods developed to safely ship Class A plastic parts without scuffing or scratching damages
- Conducted “fit and function” trials when sample packaging arrived and worked with packaging suppliers until all observed issues were corrected
- Conducted comprehensive packaging testing to ensure that containers met ISTA 3A and ISTA 3B standards
- Created detailed packaging instructions for all major “part types” with eventual goal being a packaging instruction for every part
