

Benefits of Working as a Consultant

Today's job market has changed. Job seekers are choosing positions that allow them flexibility and autonomy, which is why it is no surprise that consulting is becoming more popular than ever. Whether just starting a career or making the change from a full-time position, consultants are finding that there are numerous benefits, such as:

FLEXIBILITY - YOU'VE GOT OPTIONS

In contrast to a traditional 9-5, on-site workday, consultants enjoy a variety of types of flexibility in their schedules, such as:

- Location: Consultants can often work from multiple locations or relocate to be in desired area.
- Annual Workload: Consultants can choose to take on a smaller project workload when time is needed for other life activities.
- Industry Exposure: Consultants that work for companies involved in multiple industries often have the option to expand and develop new industry expertise.

FOCUS - LEVERAGE YOUR PASSION

Scope creep arises when companies reorganize and engineers end up with tasks and projects beyond or beneath their skillset. Since packaging engineering consultants are hired for a single focus, they do not experience the same scope creep as packaging engineers in traditional roles. It also allows contractors to focus on the subjects they are passionate about without being derailed by menial tasks.

VARIETY - CUT OUT THE BOREDOM

Consultants often get to see a large variety of projects, which allows for development of new skills and discovery of new ways to leverage their expertise. This exposure to both a diverse range of projects and industries, gives consultants the ability to evaluate areas that interest them and learn what they love. Consulting is the optimal choice for anyone who thrives on challenge.

ALIGNMENT - FIND A CULTURE THAT FITS

Working for a consultancy, engineers have the option to work for a number of different companies, which means exposure to a multitude of cultures. As organizational culture is often a large factor in employee happiness, consultants get to sample a variety of different cultures and learn what kind of environment they feel best fits their personality, goals, and allows them to be most productive.

ABOUT ADEPT GROUP

Adept Group believes that packaging is more than a container-- it's a powerful vehicle, connecting iconic brands to consumers, safely transporting life-saving medicines and protecting the food and drinks we consume every day.

Adept is the leading expert for packaging engineering, providing teams with flexible, scalable service through staffing, engineering services and business processes. Our portfolio of accelerators and products capture and create value from packaging.
