

Let Adept be the C.U.R.E. for Your Chain of Identity for Gene Therapy

Companies specializing in gene therapy must ensure that the right medicine makes it to the right patient, at the right time, every single time. Gene therapy is at the forefront of medicine, making it a sensitive process that requires a centralized and complete record of identity so that brands can track their products every step of the way.

The supply chain of these sensitive products must guarantee the integrity and identity of the patient from the moment cells are collected to be modified, until the time they are infused.

Adept understands the importance of Chain of Custody and Chain of Identity and has a breadth of serialization and traceability expertise that can be applied to gene therapy's unique record of custody and record of identity challenges. Adept can provide your company the following:

C

Confidence

Confidence that your therapy is collected, transported, manufactured and dispensed with full traceability and with no possibilities of mix-ups, delays or loss of product

U

Unique Assurance

Unique assurance on the identity, purity, strength and composition of your gene therapy

R

Repeatable Processes

Repeatable processes that can be executed over and over and applied throughout various supply chain scenarios

E

Embedded Technology

Embedded packaging technologies used for the identification and traceability of each process step and each individual therapy

About Adept Packaging

The gene therapy packaging experts at Adept Packaging are the industry leaders in providing simple, efficient, and effective packaging programs. Don't let packaging predicaments prevent your product's success – solve them before they start with Adept Packaging. Our gene therapy packaging experts can create packaging programs for companies at every stage, crafting your packaging process so you can get on with saving lives.

Adept is the leading expert for packaging engineering and serialization, providing teams with flexible, scalable service through staffing, engineering services, business processes and technology. Our portfolio of accelerators and products capture and create value from packaging. Our collaborative team is always on top of the latest trends in packaging technology, while developing services and products geared toward the trends in our clients' industries.
