

Designed a Robust Custom Thermal Shipper
to ensure cooling efficiencies and quality standards

Reduced Cost by 5x
through implementation of new package design

PACKAGE DEVELOPMENT

Temperature-Sensitive Products

Client Needs

A prominent medical group was seeking alternative frozen shippers for their current temperature-sensitive blood plasma products. The company was using an over-engineered pre-qualified shipper for their product using vacuum insulated panels and a block of dry ice. A novel and custom design with significant saving measures was developed.

Steps Taken by the Adept Team

- Worked with stakeholders to understand the challenges associated with the project
- Developed shipper, insulation and dry ice tray configurations options that met the quality and performance standards of the original shipper
- Tested the new design and process to ensure it met pre-approved acceptance criteria
